## MORE USEFUL INFORMATION FOR THE FUTURE

For comments, suggestions or tips, please contact [Larry](#). To view [past newsletters](#) or [homepage](#).

**PREFACE:** We have decided not to run anymore information on the Wuhan Virus, nor Black Lives Matter or the riots and Lies that are swirling around the Internet.

And, for sure, no more “rants” from self-appointed spokesmen, that just run off at the mouth – and say things we are all very well aware.

What we plan on doing, from here on into the election, is to try to educate you on some things we feel a lot of people are not aware of.

Once again, we thank all our readers for their most recent, kind comments regarding our Newsletter.

Also, a big thanks again, to all the readers that have been sending us very useful information.

## **ON WITH THE SHOW!**

First off, I was informed by my past Japanese student, from his China contacts, that the Chinese government is “transitioning” from domestic production into military production of certain items.

The Chinese government is also telling its people to get ready for an “imminent attack” from America.

The situation around Taiwan is more tense than ever.

### **Here is our overall take:**

Something big is going to happen *before* the election. The Chinese were hoping for a Biden win – but even they are not that foolish.

China is scared to death that the Three Gorges Dam is going to fail. If it does, it will contaminate the world

– and China will be considered the scourge of the earth.

So China has to act fast, if it wants to *divert attention* of the international community.

As for the Wuhan Virus – people are now on to it. A complete hoax – to cover up for an *intentional* biological experiment, that went radically wrong.

China has boxed itself in – and when that happens – things get ugly in very short order.

On a side note, we live just above the Kawasaki Shipyards – and at last count there have been about a dozen Japanese submarines coming and going for maintenance – just in the past month. That is not the norm by any means.

The riots will start to calm down in America.

The Democrats will keep Biden from debating in person.

Also, there will be no Democratic convention – but there will be one for Trump.

All this points up to a Trump victory – and the world leaders – especially China, Russia and Iran – shudder at the thought of a second term for Trump.

## **A REVEALING VIDEO OF CHINA'S ENCROACHMENT ON THE AUTOMOBILE INDUSTRY**

If you want to see in graphic depiction how China has stolen the car production industry I suggest you watch this very vivid video. Especially the last 3 minutes. Trump was on to this charade a *decade* ago.

[This depiction is quite dramatic.](#)

## **LOOK FOR AN ALL-OUT REVOLUTION**

If the Electoral College Electors decide to vote “their conscience” instead of the way their State has voted, America could be facing an all-out revolution.

[This information](#) is extremely pertinent to the November election. Democrats are already devising way to make the Electors cast their ballots in favor of the Democratic Party. As you can see, the punishment is minimal – and with hefty bribes by the Democrats, many people would take a dive for the money –

especially in these hard-pressed economic times.

## **AN EXIT STRATEGY**

No matter how “easy” a battle looks – on paper – a good general always makes sure he has a viable Exit Strategy – just in case things go badly on the battlefield.

Six States to consider moving to, if Biden is actually elected are:

South Dakota

Montana

Idaho

Iowa

Utah

Wyoming

I would not consider Florida, Nevada, Arizona or Texas. Florida simply has too much bad weather and the other states are excruciatingly hot during the summer.

Also, all these states are experiencing an influx of Liberal “immigrants” from both California and New York, and in short order, those states will become

blue. The Liberal contagion is spreading throughout the country. Be careful where you move to.

## **AND NOW FOR SOME ITEMS TO THINK ABOUT – FOR YOUR FUTURE CONTEMPLATION**

This is a long, but very interesting list of Future Predictions. The reason I am including them in full, is because many of our readers are younger – and maybe some of these insights might help them to decide on what line of work or business to consider for their future. I found it to be extremely interesting – and thought provoking, as well.

**Happy Perusing (Which means to read *carefully*):**

### ***Welcome to tomorrow!***

1- Basic auto repair shops will disappear. Read on to know why.

2- A gas/diesel engine has 20,000 individual parts. An electrical motor has only 20 parts. Electric cars are sold with lifetime guarantees and are repaired only by dealers. It takes only 10 minutes to remove and replace an electric motor.

3- Faulty electric motors are not repaired in the

dealership but are sent to a regional repair shop that repairs them with robots.

4- Your electric motor malfunction light goes on, so you drive up to what looks like a car wash, and your car is towed through while you have a cup of coffee and out comes your car with a new electric motor!

5- Gas pumps will go away.

6- Street corners will have meters that dispense electricity. Companies will install electrical recharging stations; in fact, they've already started in the developed world.

7- Smart major auto manufacturers have already designated money to start building new plants that build only electric cars.

8-Coal industries will go away. Gasoline/oil companies will go away. Drilling for oil will stop. Say goodbye to OPEC! The middle east is in trouble.

9- Homes will produce and store more electrical energy during the day and than they use, and will sell it back to the grid. The grid stores it and dispense it to industries that are high electricity users. Has anybody seen the Tesla roof?

10- A baby of today will see personal cars only in museums. The FUTURE is approaching faster than most of us can handle.

11- In 1998, Kodak had 170,000 employees and sold 85% of all photo paper worldwide. Within just a few years, their business model disappeared and they went bankrupt. Who would have thought of that ever happening?

12- What happened to Kodak and Polaroid will happen in a lot of industries in the next 5-10 years ... and most of us don't see it coming.

13- Did you think in 1998 that 3 years later you'd NEVER take pictures on film again? With today's smartphones, who even has a camera these days?

14- Yet digital cameras were invented in 1975. The first ones only had 10,000 pixels, but followed Moore's law – that technological capacity will DOUBLE every year. So as with all exponential technologies, it was a disappointment for a time, before it became 'way superior and became mainstream in only a few short years.

15- It will now happen again (but much faster) with Artificial Intelligence (AI), health, autonomous and electric cars, education, 3D printing, agriculture

and jobs.

16- Forget the book, “Future Shock”, welcome to the 4<sup>th</sup> Industrial Revolution.

17- Software has disrupted and will continue to disrupt most traditional industries in the next 5-10 years.

18- UBER is just a software tool, they don't own any cars, and are now the biggest taxi company in the world! Ask any taxi driver if they saw that coming.

19- Airbnb is now the biggest hotel company in the world, although they don't own any properties. Ask Hilton Hotels if they saw that coming.

20- Artificial Intelligence: Computers become exponentially better in understanding the world. This year, a computer beat the best Go player in the world, 10 years earlier than expected.

21- In the USA, young lawyers already don't get jobs. Because of computers, you can get legal advice (so far for right now, the basic stuff) within seconds, with 90% accuracy – compared with 70% accuracy when done by humans. So, if you study law, stop immediately. There will be 90% fewer lawyers in the future, (what a thought!) only

omniscient specialists will remain.

22- Computer programs already help nurses diagnosing cancer, and the programs are 4 times more accurate than human nurses.

23- Facebook now has a pattern recognition software that can recognize faces better than humans. In 2030, computers will become more intelligent than humans...**COMPUTERS CAN BE UNPLUGGED....OR SHOT!!!!**

24- Autonomous cars: In 2018 the first self-driving cars are already here. In the next 2 years, the entire industry will start to be disrupted. You won't WANT to own a car anymore as you will call a car with your phone, it will show up at your location and drive you to your destination.

25- You will not need to park it. You will pay only for the driven distance and you can be productive while driving. The very young children of today will never get a driver's license and will never own a car.

26- This will change our cities because we will need 90-95% fewer cars. We can transform former parking lots into green parks.

27- About 1.2 million people die each year in car

accidents worldwide including distracted or drunk driving. We now have one accident every 60,000 miles. With autonomous driving that will drop to 1 accident in 6 million miles. That will save more than a million lives worldwide each year.

28- Some traditional car companies will doubtless become bankrupt. They will try the evolutionary approach and just build a better car, while tech companies (Tesla, Apple, Google) will do the revolutionary approach and build a computer on wheels.

29- Look at what Volvo is doing right now; no more internal combustion engines in their vehicles starting this year – with the 2019 models using all-electric or hybrid only, with the intent of phasing out the hybrid models.

30- Many engineers from Volkswagen and Audi are completely terrified of Tesla – and they should be. Look at all the companies offering all-electric vehicles. That was unheard of only a few years ago.

31- Insurance companies will have massive trouble because, without accidents, the costs will become cheaper. Their auto insurance business model will disappear.

32- Real estate will change. If you can work from home (or from literally anywhere), people will abandon their towers to move far away to more beautiful affordable locations...**You're welcome to come to South Dakota.**

33- Electric cars will become mainstream about 2030. Cities will be less noisy because all new cars will run on electricity.

34- Cities will have much cleaner air as well.

35- Electricity will become incredibly cheap and clean.

36- Solar production has been on an exponential curve for 30 years, but you can now see the burgeoning impact. And it's just getting ramped up.

37- Fossil energy companies are desperately trying to limit access to the grid to prevent competition from home solar installations, but that simply cannot continue - technology will take care of that strategy.

38- Health: The "Tricorder X" will be announced this year. There are companies who will build a medical device (called the Tricorder from Star Trek) that works with your phone – taking your retina scan, your blood sample, and you breathe into it. It

then analyses 54 bio-markers that will identify nearly any disease. There are dozens of phone apps out right now for health.

WELCOME TO TOMORROW! – some of it actually arrived a few years ago.

## **IN CLOSING**

As stated earlier, we want to try to help our readers to try to get ready for the many changes that face America today.

The old Military Adage:

‘Even though you have planned your military strategy well, once you enter the battlefield – everything changes. You have two choices: Adapt – or die.

Once again, many thanks to our readers for the information that they continue to provide us. You are really helping out other Sovereign Individuals in the process!

That is it for now. Take care, stay safe and keep thinking positive.

Until next time, Sayonara from Kobe, Japan!

Lawrence Klepinger
